

Overview

The INXPO STUDIO Media Editor is a cloud-based application for editing recorded media. Live programs aren't always perfect, but on demand programs can be with the powerful Media Editor at your fingertips.

Sometimes a speaker makes a mistake during a live broadcast and needs to re-record. Other times, one speaker can't record at the same time as other speakers, or new content needs to be appended. The Media Editor provides tools to address all of these scenarios and many more.

Editor Capabilities

- Trim recording “heads and tails”
- Add or delete a segment
- Import pre-recorded content
- Stitch together multiple pieces of media
- Manage multiple media versions
- Add or replace slides
- Change slide timings
- Add or update chapters
- Export recorded content to MP4
- Preview all changes live before saving
- Content automatically converted for adaptive bitrate streaming
